

How to add some *SPAZ* to your website.

The following presentation shows you how you can add some life to your website.

Pictures

Adding pictures to your website will grab your viewers attention and make them want to stay on your site longer. If your website does not have a place for all of your pictures to go, weather it be serious or humorous pictures, you should make a point to create a page that both captures your point and purpose of making the page and entrances them to keep coming back for more.

QR Codes

This is a QR Code! QR Codes are used by mostly businesses, BUT that does not mean that an average person can not make and use of these to either promote their business or their website. There are various websites that can allow the producer to make their qr code. A website that I have used for my own website to make my own QR Code (shown on the left) is _____. If you do not know how to use a QR Code let me explain. Its very simple, if you have a smartphone or any phone that will you to get a QR SCANNER you can take a picture of the QR code with your phone and it will do the rest! If you would like to practice, try scanning the QR Code to the left and see where it takes you!

Website Building #14

Inserting a movie or video to your website is as simple as going to [YouTube](#), finding the video you wish to put on your website, and getting the embed code. To find the embed code you must first click on the video of your choice. Then, at the bottom, below the video, you will see a button that says Share. Click on it! It will already have the URL highlighted for you, but that's not what you need. You need to click on the Embed button.

After making your selection, copy and paste the embed code below the video. The code changes based on if you choose to, Show suggested videos when the video finishes, Use HTTPS, Enable

privacy-enhanced mode, or if you decide to Use the old embed code. You can also choose how big you would like your video to be, either 560 x 315 (small), or 640 x 360 (bigger than small), or 853 x 480 (medium), or even 1280 x 720 (large). Depending on which one you choose your code will vary. If you are using a site such as [Weebly](#), then you will be able to just copy and paste the embed code there and it will do the rest for you.

Games

If you are willing to dedicate your time to your website, and really working on your computer, you can add games to your site. Adding games is as easy as going to a game site that allows you to get the EMBED CODE from the game of your choice. A website that allows you to do this and is very entertaining for game players is ADDICTING GAMES.com Here you can copy and paste the code into your website and the game will appera there!
